

CaReFoAfrica:

Capacity Building for Climate-Resilient Food Systems in Africa

Climate change has massive impacts on the agricultural sector in Africa. The problems of climate change affecting the sustainability of the agricultural sector and food security in Africa are urgent and complex.

The CaReFoAfrica project aims to build human capacity in the field of climate change mitigation and adaptation in the agricultural sector of Africa. The project provides mobility scholarships for African M.Sc. and Ph.D. students, for trainees and university staff members to study, learn and conduct research abroad. The project offers a wide range of exciting academic courses at 6 African universities.
