Embracing vs. Denying AI's Impact in Education

The screenshot shows the Visual Studio Code interface. At the top, the menu bar includes Code, File, Edit, Selection, View, Go, Run, Terminal, Window, and Help. Below the menu bar is a search bar with a magnifying glass icon and the text "Search". The Explorer sidebar on the left shows "NO FOLDER OPENED" and provides instructions on how to open a folder or create a Java project. The main editor area has three tabs: "Fib1.java U", "website.html", and "def fibonacci(n): Untitled-1". A chat window is open over the code editor, displaying the prompt "implement the fibonacci algorithm" and buttons for "Accept", "Discard", and a refresh icon. The code editor shows a Python implementation of the Fibonacci function:

```
1 def fibonacci(n):
2     if n <= 0:
3         return "Input should be positive integer"
4     elif n == 1:
5         return 0
6     elif n == 2:
7         return 1
8     else:
9         a, b = 0, 1
10        for _ in range(n - 2):
11            a, b = b, a + b
12        return b
```

As the ascendancy of Artificial Intelligence becomes an undeniable reality, its profound influence on the educational landscape is poised to revolutionize not just teaching methodologies but also fundamentally transform the approach to assessment, ensuring a more subtle, efficient, and personalized evaluation process.

Delicate dance of surgery, where precision meets intuition, the question isn't whether to trust the hands of a robot or a human, but rather how to blend the infallible with the irreplaceable.

AI vs Human Doctors

- 
- Generative AI tools, like ChatGPT, revolutionize our approach to education by transforming how we interact with information and construct knowledge.

The Good Question

← **Post**

 **Maha Bali, PhD** مها بالي 🇸🇦 🇵🇸
@Bali_Maha

So what are the characteristics of an assignment that AI cannot fully succeed in writing?

Is that the right question? Or is the question we should be asking:

How do I design an assessment that makes my students want to truly learn? That motivates inquiry and expression?

10:49 PM · Jan 15, 2023 · **50.3K** Views

Elementary school teachers picket against use of calculators in grade school
The teachers feel if students use calculators too early, they won't learn math concepts

Math teachers protest against calculator use

By JILL LAWRENCE

"My older kids don't pay any attention to an answer being absurd. strate," he said. "Teachers are shy."

JKUAT to expel Students found using ChatGPT during an exam

[@spmbuzzke](#) [www.spmbuzz.com](#)

In the near (NOW) Future

Historical Context and Evolution

- 1970s: Introduction of calculators in classrooms, reshaping math instruction.
- 1990s: Arrival of spellcheck and autocorrect technologies.
- 2004: Google introduces autocomplete.
- 2006: Language teachers start utilizing Google Translate, sparking extensive research and recommendations on its effective use.

Generative AI

- November 2022: ChatGPT emerges, powered by the "Generative Pre-trained Transformer" technology. The watershed moment for ChatGPT was the public release of its API by OpenAI on March 2, 2023, a democratizing move that facilitated broader access to this technology
- - Background: Utilizes neural network machine learning, analyzing extensive datasets (570GB from books, Wikipedia, articles, etc.) to generate text.
 - Functionality: Generates text based on user prompts without a guarantee of factuality, demonstrating pattern recognition over factual accuracy.

- ChatGPT's educational role evolution marks a transition from a conventional instructional tool to an intelligent facilitator and onwards to an active participant in the learning process, denoting a profound metamorphosis in function.

Characteristics and Implications of Generative AI

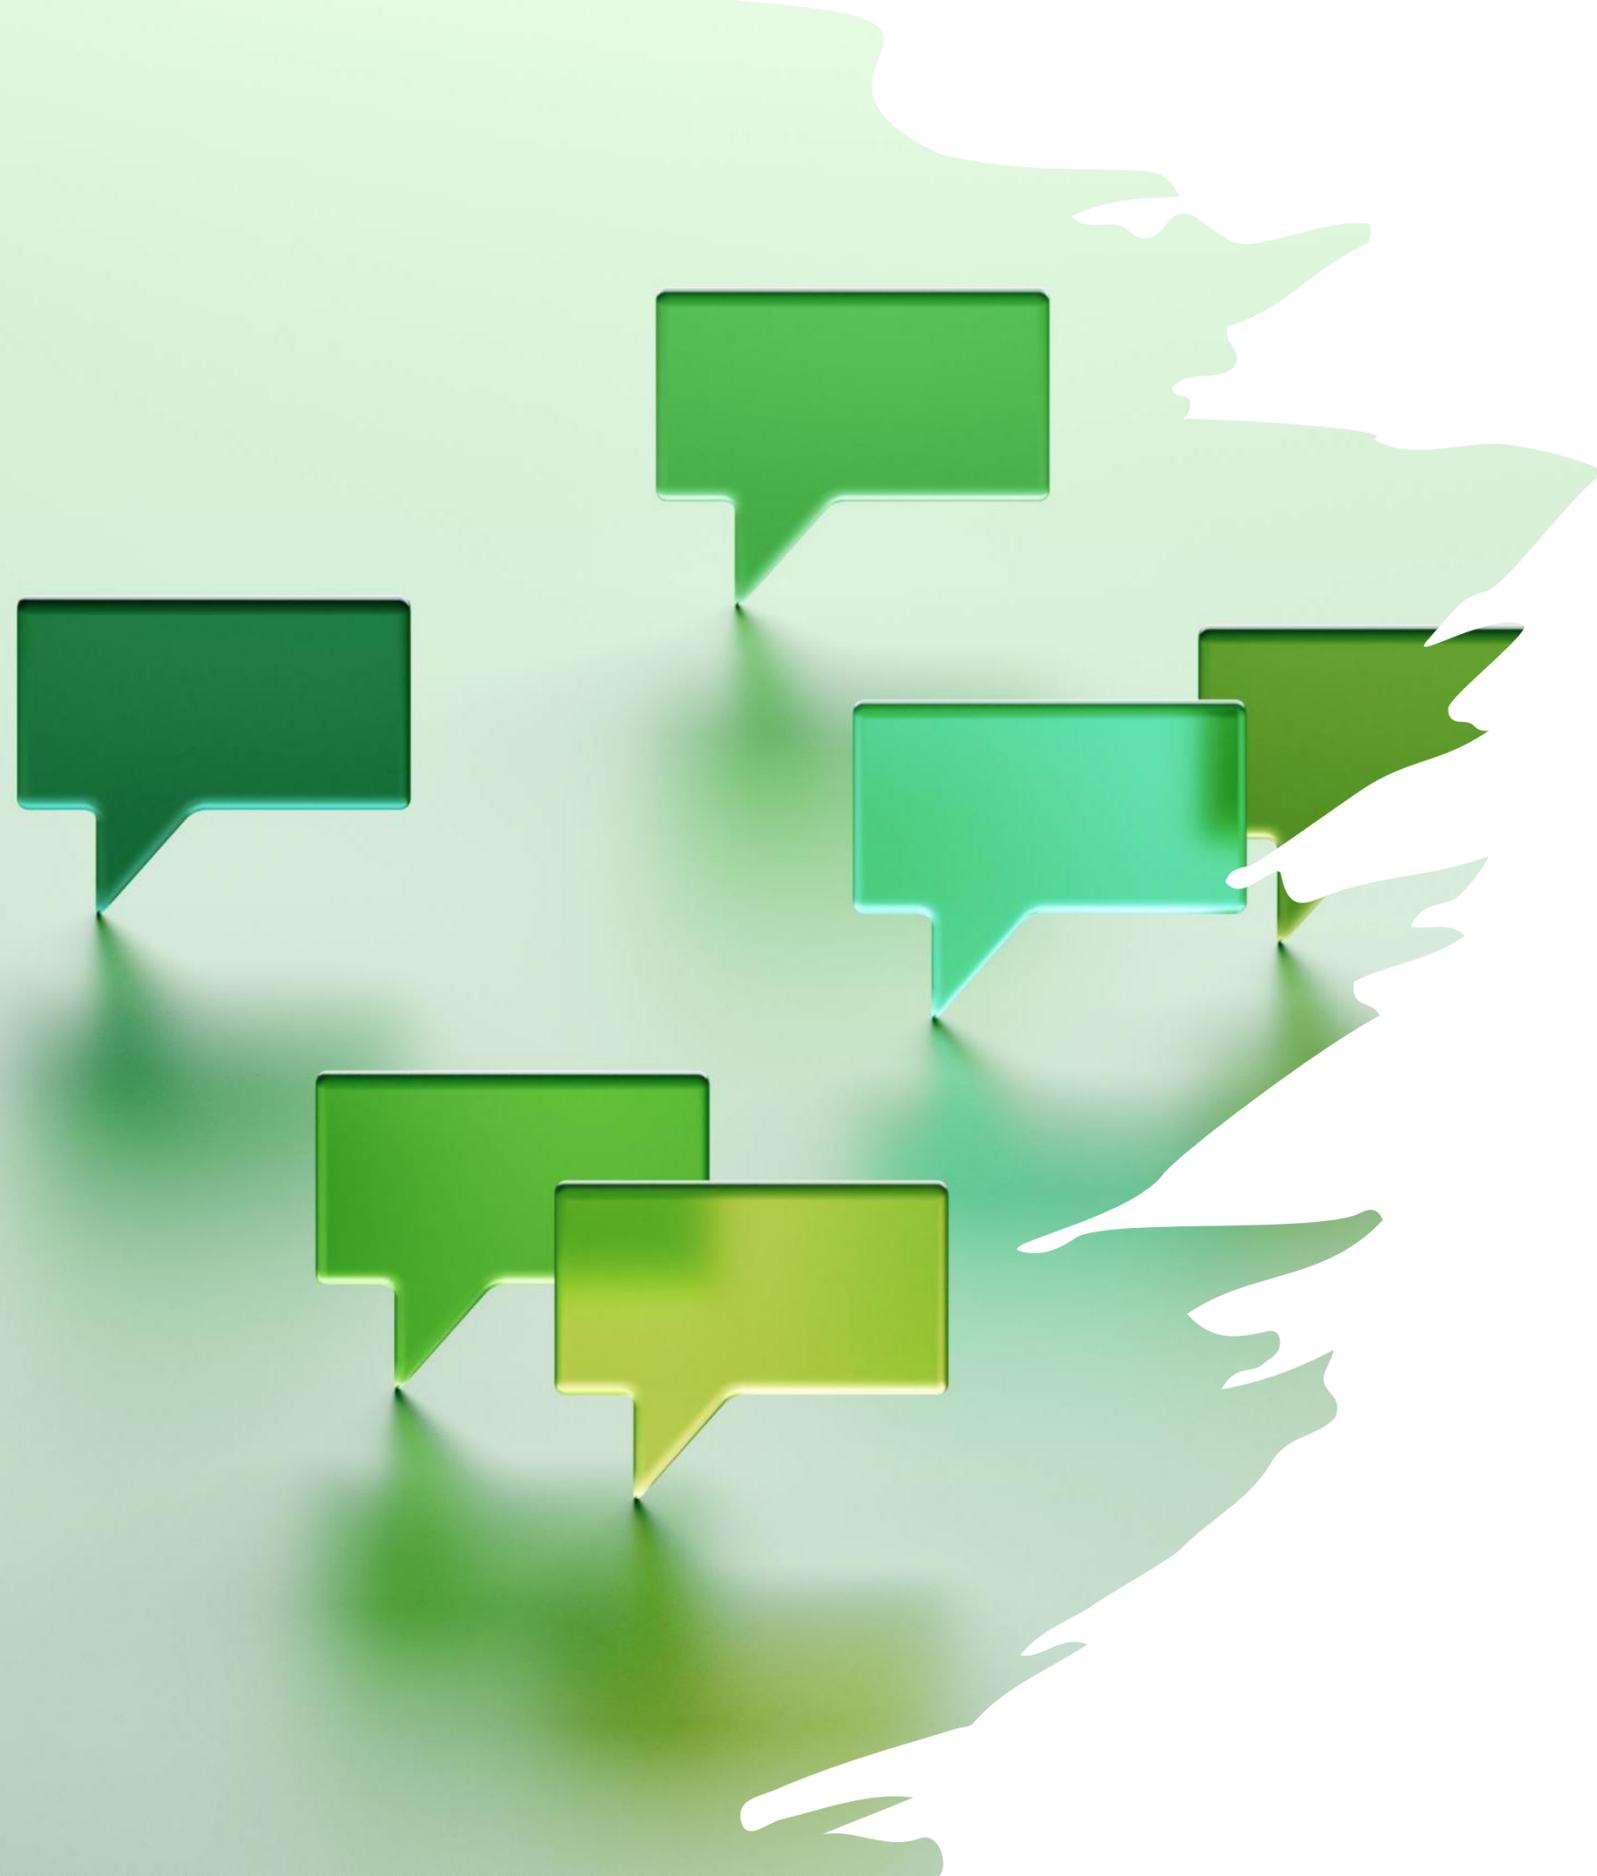

Unpredictability: The same prompt can yield different results, highlighting the non-deterministic nature of Generative AI.

Cross-tool Variability: Using the same prompt across different AI tools results in varied outputs, underlining the unique generative capabilities of each tool.

- **Educational Impact:** Represents a significant addition to technological tools in higher education, without inducing panic among faculty.

Some: AI Tools for Text Generation

- ChatGPT
 - Provider: OpenAI
 - Features:
 - Free access to a model trained on data through 2021.
 - Paid subscription (ChatGPT Plus) for GPT-4 access, faster responses, and priority for new features, including Code Interpreter plugin.
- Bing Chat (search with GPT-4)
 - Provider: Microsoft and OpenAI collaboration
 - Features:
 - Integrates with Bing for up-to-date search information.
 - Offers tone adjustment options: More Creative, More Balanced, More Precise.
- Google Bard - Now Gemini
 - Provider: Google
 - Features:
 - Provides three output versions for review, with variations in tone or content.
 - Part of Google's AI offerings, including integration into Google Drive as Duet AI.
- Claude
 - Provider: Anthropic AI
 - Features:
 - Promotes a cautious approach to text generation.
 - Allows file uploads for prompts without premium charges.

A collection of various tools including pliers, wrenches, and screwdrivers arranged horizontally against a red background. The tools are laid out in a row, with some overlapping. The background is a solid, vibrant red. The tools are primarily metallic, with some having yellow or black handles. The text "More - Generative AI Tools" is overlaid on a white horizontal band across the middle of the image.

Blooms Taxonomy - Revised

21CLD comprises six dimensions, or skills, which are essential to the development of capable and well-rounded learners. The six 21st century dimensions (or skills) are:

Knowledge construction

Collaboration

Real-world problem solving and innovation

Skilled communication

Self-regulation

Information and communication technology (ICT) for learning

Knowledge Construction rubric

1

- The learning activity does NOT require learners to construct knowledge. Learners can complete the activity by reproducing information or by using familiar procedures

2

- The learning activity DOES REQUIRE learners to construct knowledge by **interpreting, analyzing, synthesizing, or evaluating** information or ideas
- BUT the activity's main requirement is NOT knowledge construction

3

- The learning activity's **main requirement** IS knowledge construction
- BUT the learning activity does NOT require learners to apply their knowledge in a new context

4

- The learning activity's **main requirement** IS knowledge construction
- AND the learning activity DOES require learners to **apply their knowledge in a new context**
- BUT the learning activity does NOT have **learning goals in more than one subject**

5

- The learning activity's **main requirement** IS knowledge construction
- AND the learning activity DOES require learners to **apply their knowledge in a new context**
- AND the knowledge building IS interdisciplinary. The activity DOES have **learning goals in more than one subject**

Higher levels of Bloom's Taxonomy

- Localize Assignments: Highlighting the importance of incorporating class discussions, specific texts, and recent events.
- Personal Reflections: Explaining how personal reflections ensure authenticity.
- Exploratory Activities: Discussing the value of hands-on activities that require personal input, beyond what AI can generate.- **Problem Based Learning.**
- Assignment Formatting: Offering strategies for formatting assignments to, including breaking down assignments and incorporating in-class tasks.

• “As we navigate the frontier of education with tools like ChatGPT and other GenAI applications, we're not just evolving how we assess knowledge; we're redefining what it means to learn, teach, and understand. These technologies offer us a mirror, reflecting the depth of human intellect and the boundless potential for innovation. Yet, they also pose a profound question: How do we measure learning in an era where knowledge creation is not just about the answers we find, but the questions we dare to ask? In embracing these tools, we commit to a journey of discovery—one where the ultimate assessment lies in our ability to integrate, innovate, and inspire”
OpenAI. (2024). *ChatGPT (4)* [Large language model]. <https://chat.openai.com>
